Report interpretation

The normalized score is shown as a range of percentiles for each of the Big Five personality characteristics and their facets that is based on qualities that the service deduces from the input text. The service calculates normalized scores by comparing the individual score for the analyzed text with results from a large global sample. The service reports each percentile rank to simplify visualization and interpretation:

- Below you will find non-exhaustive information to better understand the meaning of the results of the analysis.
- There are no -good or bad- values per se and these are not psychometric tests that analyze pathologies.
- Analyze the results with the advice of people trained to interpret personality and competency assessments to provide you with guidelines for action adapted to each context.

For example, a percentile of 0.65 (65%) for a variable exhibits the tendency for a measure that is higher than 65 percent and lower than 35 percent of the sample population. The score will be accompanied by the label 'Medium High' which corresponds to the range 60-74. An example that may help: if you are 6'2" tall and 90 percent of the population is 2'2" tall, you would be "Short", but if only 10 percent of the population is taller than you, you would be "Very Tall".

The accuracy depends on the number of words sent. The greater the length of the text, the greater the accuracy of the analysis. the greater the accuracy of the analysis.

Socio-Emotional Skills

	Minor trend	Adults Trend
● Open-Mindedness	● Low	Low
● Task Performance	● Very high	Medium high
● Engagement with others	● Very high	High
● Collaboration	● Medium high	High
● Emotional Dysregulation	● Medium	High

Areas of Improvement **Minor trend**

● **Open-Mindedness**

Improvement Area

Description

A person with little Open-Mindedness to experience probably prefers routine to variety, tends to be conventional in behavior and appearance, sticks to what he knows and is familiar with. He prefers the less abstract arts and entertainment and follows the established paths. They tend to distrust ideas that can cause profound changes. They are more comfortable following their habits meticulously and tend to more rigid thinking.

Recommendations

Some guidelines that can help develop an open mind are:

- Active listening training: This means paying attention and asking questions to better understand others' perspectives and opinions, rather than simply waiting to speak.
- Opening up to new experiences: This can include trying new foods, meeting people from different cultures, traveling or learning a new language.

Developing this mental attitude may take time and effort, but it can be very beneficial in education, work and personal life.

● **Imagination**

Improvement Area

Description

Tendency to prefer facts over fantasy.

Recommendations

Some guidelines that can help develop imagination are:

Trends

Adults Trend

Adult trend 2024. Represents the personality of the subject compared to the population over 19 years of age

Minor trend

Minor trend 2024. Represents the personality of the subject compared to the underage population between 8 and 18 years of age

Factors

Achievement striving

High aspiration levels and a tendency to work hard to achieve one's own goals.

Activity level

Need to occupy yourself. Preference for dynamism and activity.

Altruism

Generosity, active concern and consideration for the welfare of other people.
